

SB NUTRIZORB

SB NutriZorb is a high performance soil ameliorant for use in amenity turf.

Volcanic in origin, it is highly porous, possessing a high active surface area.

SB NutriZorb adsorbs ammonium nutrient NH_4^+ and releases it upon demand from the plant and microbes. It is extremely low in salts but rich in iron, magnesium, calcium & many other trace elements. In granular form SB NutriZorb is an ideal ameliorant, especially in heavy organic soils, improving percolation and gaseous exchange.

We applied 550 bags to the greens.

This will improve the drainage on the greens

Each autumn we will apply 100 bags to keep on improving the soil texture and structure which in turn will improve the drainage of the greens.
